

NOW ACCEPTING APPLICATIONS! SUMMER 2022 RESEARCH EXPERIENCE FOR UNDERGRADS

The Center for Statistics and Applications in Forensic Evidence (CSAFE) is accepting applications for its summer research experience for undergraduate students (REU). Applications will be accepted until all available spaces have been filled. To guarantee an application is reviewed, please apply by March 1.

About the Program

CSAFE's REU will return to an in-person program this year but will include a blended virtual experience. The REU will be held May 23–August 5, 2022, with possible placement opportunities at Iowa State University, West Virginia University and the University of Pennsylvania. Students will participate in person at their respective host institution and join large group meetings and experiences in a virtual space.

During the 10-week, immersive internship program, students will discover how statistical and computational concepts apply to CSAFE's key research areas in pattern or digital evidence. They will work on interdisciplinary teams with faculty, graduate students and post-doctoral researchers.

Students are expected to participate in program activities for approximately 40 hours each week and join in team meetings plus any other scheduled events. Students will present their research findings at the end-of-program poster session.
